

DTF Transfer Authority Shopify Fulfillment App API & Webhook Checklist

Purpose

This checklist defines all required Shopify APIs, hosted endpoints, and webhooks needed to build and operate the DTFTA white-label, ship-only POD fulfillment service (DTF + Apparel).

1. Authentication & Installation

- OAuth install flow per partner store
- Securely store Admin API access token (encrypted)
- Track API version and granted scopes
- Handle reauthorization gracefully if scopes change

2. Required Shopify Scopes

- write_assigned_fulfillment_orders or write_third_party_fulfillment_orders
- read_orders (for shipping + ops UI)
- write_fulfillments (create shipments & tracking)
- Staff permission: fulfill_and_ship_orders

3. Fulfillment Service Registration

- Create Fulfillment Service on app install
- Enable trackingSupport = true
- Disable inventoryManagement (POD model)
- Persist fulfillmentServiceId and locationId

4. Hosted Callback Endpoints (Required)

- POST /fulfillment_order_notification (required)
- Respond 200 OK immediately and enqueue background sync
- Handle FULFILLMENT_REQUEST and CANCELLATION_REQUEST
- Verify authenticity and rate-limit endpoint

5. Webhooks (Strongly Recommended)

- APP_UNINSTALLED – cleanup tokens and webhooks
- Fulfillment order lifecycle events
- Order cancellation events
- Verify HMAC and enforce idempotency

6. Required Admin API Calls

- Fetch fulfillment orders assigned to DTFTA location
- Create fulfillments with tracking information
- Update tracking after shipment if needed
- Optionally create fulfillment events (in■transit, delivered)

7. Internal DTFTA API Endpoints

- Partner profile CRUD (white■label branding)
- Ops job queue and job detail endpoints
- Ship endpoint (carrier + tracking)
- Callback handler to reconcile Shopify state

8. Edge Cases to Handle

- Partial fulfillments and split shipments
- Cancellations after production start
- Missing dtfta_ line■item properties
- Duplicate webhook/callback events

9. Acceptance Tests (Definition of Done)

- Install app → fulfillment service + location created
- Order routes to DTFTA → job created
- Ship → tracking appears in Shopify
- Uninstall → tokens and webhooks removed
