

DTF Transfer Authority Shopify POD Fulfillment App System Flow Diagram

Overview

This document visually describes the end-to-end system flow for the DTFTA Shopify Fulfillment Service App, from partner installation through order fulfillment and shipping updates.

End-to-End Fulfillment Flow

1. Partner Store	Customer places order (DTF or Apparel POD)
↓	
2. Shopify Platform	Creates Fulfillment Order assigned to DTFTA location
↓	
3. Shopify → DTFTA Callback	POST /fulfillment_order_notification
↓	
4. DTFTA Backend	Fetch fulfillment orders via Admin API
↓	
5. DTFTA Job Engine	Validate SKU + dtfta_ properties
↓	
6. DTFTA Ops Dashboard	Job appears (NEW / ARTWORK_NEEDED)
↓	
7. Production	Print DTF or Apparel POD
↓	
8. Shipping	DTFTA ships using partner white-label return info
↓	
9. DTFTA → Shopify API	Create fulfillment + tracking
↓	

10. Shopify	Order marked fulfilled, customer notified
-------------	---

Supporting Flows

Install Flow

Partner installs app → OAuth authorization → DTFTA Fulfillment Service + Location created → Partner configures brand profile and SKUs.

Cancellation Flow

Merchant cancels order → Shopify notifies DTFTA → Job cancelled or flagged if already in production.

Exception Flow

Missing artwork or invalid SKU → Job status set to ARTWORK_NEEDED or EXCEPTION → Partner notified.

Key Principles

- Shopify is the source of truth
- DTFTA is a ship-only, white-label fulfillment center
- All customer-facing branding comes from partner profiles
- All events are idempotent and API-driven
